22 April 1968 JCB K-78-361 7 7 CT - 4 00 4

Dear Hazel:

During our meeting 2 April 1968 you requested that we document to you our method of collecting and allocating computer charges (as related to FL-CT-4004) and our method of charging EMR's (as related to FL-CT-4005). Subsequent to our meeting, we were able to locate back-up documentation for the above referenced computer charges and have shown this to

25X1A

am submitting with this letter three copies of excerpts from our company procedures covering pricing and handling of Expense Material Requisitions. The items questioned on contract FL-CT-4005 FY '65 are documented on all the documents utilized in our EMR control procedure with the one exception of the requisition card (Exhibit 10 of the attached procedure). Two boxes of these cards which cover transfer to all programs during the period involved on FL-CT-4005 (November-December 1964) have been lost. Based on our past history of locating back-up documentation, the double checks in our EMR procedure and the fact that the questioned charges were verifiable in all but one area of our procedure, the charges questioned on FL-CT-4005 were allowed by mutual agreement during negotiations.

	Very truly yours,
25X1A

authority in hers. These committed har amounts are furnished to Data Fre reginal Project Authority Number for association to the proprie contract in the Project Cost Summan This data provides the sthod whereby the Progrand Accountant may furnish the customer with both handed and committed material dollars

(3) Expense Material Requisitions

Expense Material Requisitions are a second segment of direct material in the Contract Ledger.

- a. The Cost Section receives all Direct and Indirect Expense Material Requisitions (Exhibit 10). These Expense Material Requisitions include material transferred as follows:
 - 1. From one Project Authority Number to another Project Authority Number (Card A, Exhibit 10).
 - 2. From an inventory account to a Project Authority Number (Card B, Exhibit 10).
 - 3. From an inventory account to a given department expense account (Card C, Exhibit 10) and vice versa.
 - 4. From a department expense account to a Project Authority Number (Card D, Exhibit 10) and vice versa.
 - 5. From an inventory account to an inventory account (Card E, Exhibit 10).

Card E represents a complete Expense Material Requisition.

- b. The Expense Material Requisition is prepared in the area distributing the material and includes the following information processed by the Cost Section:
 - 1. Part Number for the material requisitioned.
 - 2. Project number, if the material is direct.

Control to the Water Comment of the Water Comment

NO. ____

- 3. Charge account number.
- 4. Name and description of part for which the material is requisitioned.
- 5. Credit Account Number.
- 6. Quantity of delivered material.
- 7. Material Unit Price (secured by the Cost Section).
- 8. Material Location delivered to.
- 9. Material Location delivered from.
- c. If an area distributes numerous types of material on one request, these types are posted to an Expense Material List (Exhibit 11). One Expense Material Requisition card is used for the total sum of all material charges for the one requisition when it is submitted by the Cost Section to Data Processing.

Each month the Cost Section receives from the various material disbursing areas a list of material which has been used on the assembly line to support fabrication. Such material may include chemicals, wire, or epoxy, etc. These materials are prorated to various Project Authority Numbers by the areas disbursing the material and requisitions are submitted for all such materials charged to each Project Authority Number. The Cost Section balances the charges on the Requisition Cards to the charges posted to the list.

- d. The total quantity delivered is extended and verified by unit price to compute the total material value of the Expense Material Requisition.
- e. Expense Material Requisitions are sorted by various debitcredit categories and initially checked for validity. Any invalid Expense Material Requisitions are returned to the

NO. ____

originator for clarification. Cost economics determine that an Expense Material Requisition having a total value of three dollars or less is not processed.

Valid Expense Material Requisitions are forwarded to Data Processing on a weekly basis together with control totals for both card volume and dollar amount. Data Processing key punches the Expense Material Requisitions and returns the Expense Material Requisitions cards to the Cost Section. The Cost Section is also furnished with a weekly audit listing of direct expense material requisitions (Exhibit 12) and indirect expense material requisitions. The direct Expense Material Requisition listing is sorted by Project Authority Number, inventory account, and departmental expense account for both debit and credit entries. The indirect Expense Material Requisition listing is sorted in the same sequence.

- f. Expense Material Requisition lists are audited by the Cost Section. All requisitions found in error are resolved by the Cost Section if possible. If not, those requisitions which have an error in their Project Authority Number or charge account number are returned to the person who ordered the material or to the department to which the material was delivered. Those requisitions which have an error in their credit account number, quantity delivered, or the material unit price furnished, are returned to the department from where the material was furnished. In both situations stated above, the corrected Expense Material Requisitions are returned to the Cost Section. The audit performed by the Cost Section for direct and indirect Expense Material Requisitions includes:
 - 1. A charge to a project authority must be made to an active project authority or must be dated prior to the closing of the project authority.
 - 2. An inventory number must be valid.
 - 3. An account number to be correct must include department, expense account, and corresponding charge-to numbers.

NO. _1

All corrected Expense Material Requisitions are then resubmitted to Data Processing for incorporation into the next week's Expense Material Requisitions.

- Each month Data Processing prepares for the Cost Section g. audit listings of all Expense Material Requisitions. These listings are audited for possible erroneous entries. Such errors are resolved similar to those erroneous requisition entries included on preliminary Expense Material Requisition weekly listings.
- Data Processing prepares an Expense Material Requisition h. Monthly Summary of Direct Material (Exhibit 13). This summary shows all Direct Material charges by Project Authority Number.
- The indirect material charges resulting from Expense i. Material Requisitions are incorporated monthly into the Plant Factory Ledger.

Material Costs

- Financial Accounting furnishes the Cost Section a recap for each separate Journal Entry prepared to reclassify charge to Direct Material.
- The Cost Section prepares an Other Material Charge Listing (Exhibit 14) which represents any reclassified Journal Entry of Direct Material charges which have been made b Financial Accounting or the Cost Section as of the date the listing is prepared. An subsequent other material charges are journalized at month end and included in the Contract Ledger.

 These reclassified Direct Material charges may include:

- Late accruals for Voucher distribution.
- Checks received by the Cashien fee Di charges.
